Question related to:	EN/prEN: EN 344-1	Other:	
Annex:	Article:	Clause:	
Key words: insoks testing			
Question: During the meeting of CEN TC 161 WG1&2 held in Naples, it was decided to test the insocks whether they cover the whole surface or just a part of it. It should be decided which tests are to be carried out. We think that the "water absorption and desorption" and the abrasion resistance are enough. For the second test, and bearing in mind the materials which are usually employed, the method, used for the linings should be applied.			
Solution: The insocks shall be test even if they cover just a part of the whole surface. "water absorption and desorption" and the "abrasion resistance" shall be performed. For the second test, and bearing in mind the materials which are usually employed, the method, used for the linings should be applied.
