Question related to: Certification	Annex:	Article:	EN ISO
			Other: -----
			Clause: -----
Key words: One model and different protecting components			
Question: We have allowed sometimes to use two different steel toecaps, very similar but different make. We have tested the model with both toecaps and the corrosion in both of them and that was all.  But now a manufacturer wants to have in a single model the possibility to use steel and non metallic toecaps, metal and textile inserts. Of course all possibilities shall be tested, but, is it possible to call it a single model?			
Solution: When the safety components are from different materials that have different properties / dimensions they will have to be treated as different models with different product names so that they can be differentiated in the market place.
