Question related to     PPE Regulation                                   EN/prEN:                                   Other:

Article: \_\_\_\_\_ Annex: \_\_\_\_\_ Clause: \_\_\_\_\_

**Key words:**  
test reports, designation of materials

**Question:**  
In test reports, materials are often only referred to by a single, mostly commercial reference name. In many cases, however, this name covers a variety of materials different by structure and weight (for fabrics) or by origin and thickness (for leather).  
Is it possible to have a uniform and clear "finger print designation" of materials in test reports in order to make an evaluation easier?  
For this purpose, we propose to use the elements as given below:

- aramid twill 2/1 - 270 g/m<sup>2</sup>
- cow split 1.3 - 1.5 mm.

**Solution:**  
A unique reference number or name identifying the material must be the same in the technical documentation and in the test report.  
The technical documentation should contain a documentation of the material, i. e. a sample or a proper identification.
