Key words: technical documentation			
Question: How should the notified body „verify“ that the model is the product described in the manufacturer’s technical documentation?			
Solution: The generally accepted action in order to verify that a PPE model has been produced in accordance with the manufacturer’s technical documentation is to conduct a visual comparison between an example of the model and a description of the model. The objective of the comparison is to ensure that, in general terms, the product is as described and that there are no obvious differences in general form or materials.  Note: The description of the model may take various forms, e. g. general assembly drawings, component drawings, photographs, material descriptions, etc.
